

amalian

Offer your patients a more
rewarding
filler experience

Amalian harnesses the benefits of pure, natural hyaluronic acid and innovative CIS (Core-in-Shell) technology to create the first truly biphasic hyaluronic acid dermal filler. The unique combination of cross-linked and non-cross-linked hyaluronic acid enables the younger, more vibrant appearance and long-lasting results your patients desire. It's the best of both worlds: excellent lifting capacity and smooth, easy injectability.

Now, with the new **2cc syringe**, you can add even more value to your service: a more cost-effective option for your patients, and the opportunity to enhance the profitability of your practice.

Contact your local Amalian distributor to learn more about how the new Amalian dermal filler can help your patients turn back time – in the most rewarding way.
